

IN THE CLAIMS:

The following is a complete listing of the claims, and replaces all earlier listings and all earlier versions.

Q' 1. (Currently Amended) An image editing apparatus comprising:
input means for inputting image data consisting of shape data and texture data;
separation means for separating the image data into the shape data and texture data;
shape manipulation means for ~~manipulating~~ transforming the shape data separated from the image data by said separation means so as to change a shape represented by the shape data; and
texture manipulation means for ~~manipulating~~ transforming the texture data in conformity with result of ~~manipulation~~ transformation by said shape manipulation means ~~after processing by said shape manipulation means ends.~~

2. (Currently Amended) The apparatus according to claim 1, further comprising display means for displaying shape data that has been ~~manipulated~~ transformed by said shape manipulation means.

3. (Currently Amended) The apparatus according to claim 1, further comprising display means for displaying an image based upon shape data that has been

~~manipulated~~ transformed by said shape manipulation means and texture data that has been ~~manipulated~~ transformed by said texture manipulation means.

a' 4. (Original) The apparatus according to claim 1, wherein shape data and texture data constituting the image data input by said input means have been encoded, and said separation means further includes decoding means for decoding the encoded shape data and texture data.

5. (Original) The apparatus according to claim 1, wherein the image data input by said input means is image data representing one object of a plurality of objects constituting one screen.

6. (Currently Amended) The apparatus according to claim 1, further comprising encoding means for encoding shape data that has been ~~manipulated~~ transformed by said shape manipulation means and texture data that has been ~~manipulated~~ transformed by said texture manipulation means.

7. (Currently Amended) An image editing apparatus for editing object image data consisting of shape data and texture data, comprising:

first manipulation means for ~~manipulating~~ transforming shape data based upon a user operation so as to change a shape represented by the shape data;

first display means for presenting a display of the shape data that reflects the ~~manipulation~~ transformation performed by said first manipulation means; and

second manipulation means responsive to a predetermined operation, ~~which is not accompanied by manipulation of shape data~~, for ~~manipulating~~ transforming corresponding texture data in conformity with the manipulation of this shape data.

a! 8. (Currently Amended) The apparatus according to claim 7, further comprising second display means for displaying an image based upon shape data that has been ~~manipulated~~ transformed by said first manipulation means and texture data that has been ~~manipulated~~ transformed by said second manipulation means.

9. (Currently Amended) The apparatus according to claim 7, wherein the predetermined operation associated with said second manipulation means is a command for ending an operation for ~~editing~~ transforming the shape data by said first manipulation means.

10. (Currently Amended) The apparatus according to claim 7, wherein the predetermined operation associated with said second manipulation means is an operation for switching a shape to be subjected to ~~manipulation~~ transformation by said first manipulation means.

11. (Original) The apparatus according to claim 7, further comprising extraction means for extracting shape data and texture data from object image data and supplying the shape data and texture data to said first and second manipulation means.

a' 12. (Currently Amended) The apparatus according to claim 7, further comprising selection means for selecting one desired item of object image data if a plurality of items of object image data exist[[:]],

wherein said extraction means extracts shape data and texture data from object image data that has been selected by said selection means.

13. (Currently Amended) An image editing apparatus comprising:
read-out means for reading a bit stream, which has been compressed and encoded, out of a storage device;
separation means for separating the bit stream, which has been read out by said read-out means, into at least a bit stream of shape information and a bit stream of texture information on a per-object basis;
decoding means for decoding, object by object, each bit stream obtained by ~~separation~~ by said separation means, thereby generating shape data and texture data;
manipulation means for manipulating the shape data[[:]] which has been obtained by said decoding means, ~~based upon a manipulation command from a user;~~

altering means ~~responsive to a predetermined command operation, which is not accompanied by manipulation of shape data~~, for altering the texture data in conformity with the manipulation of the shape data by said manipulation means;

re-encoding means for re-encoding the shape data that has been manipulated by said manipulation means and the texture data that has been altered by said altering means; and

Q1 write means for comparing a bit stream that has been re-encoded by said re-encoding means and the bit stream that has been obtained by said separation means, updating bit streams of portions that have been altered and writing the result to the storage device.

14. (Currently Amended) An image editing method comprising:

an input step₁ of inputting image data consisting of shape data and texture data;

a separation step₂ of separating the image data into the shape data and texture data;

a shape manipulation step₃ of ~~manipulating~~ transforming the shape data separated from the image data ~~[[at]]~~ in said separation step so as to change a shape represented by the shape data; and

a texture manipulation step₄ of ~~manipulating~~ transforming the texture data in conformity with result of manipulation ~~[[at]]~~ in said shape ~~manipulation~~ transformation step ~~after processing at said shape manipulation step ends.~~

15. (Currently Amended) The method according to claim 14, further comprising a display step, of displaying shape data that has been manipulated ~~[[at]]~~ in said shape manipulation step.

a' 16. (Currently Amended) The method according to claim 14, further comprising a display step, of displaying an image based upon shape data that has been ~~manipulated at~~ transformed in said shape manipulation step and texture data that has been ~~manipulated at~~ transformed in said texture manipulation step.

17. (Currently Amended) The method according to claim 14, wherein shape data and texture data constituting the image data input ~~[[at]]~~ in said input step have been encoded, and said separation step further includes a decoding step, of decoding the encoded shape data and texture data.

18. (Currently Amended) The method according to claim 14, wherein the image data input ~~[[at]]~~ in said input step is image data representing one object of a plurality of objects constituting one screen.

19. (Currently Amended) The method according to claim 14, further comprising an encoding step of encoding shape data that has been ~~manipulated~~ transformed at said shape manipulation step and texture data that has been ~~manipulated~~ transformed at said texture manipulation step.

20. (Currently Amended) An image editing method for editing object image data consisting of shape data and texture data, comprising:

a first manipulation step₁ of ~~manipulating~~ transforming shape data based upon a user operation so as to change a shape represented by the shape data;

a first display step₂ of presenting a display of the shape data that reflects the ~~manipulation~~ transformation performed ~~[[at]]~~ in said first manipulation step; and

a second manipulation step₃ responsive to a predetermined operation, ~~which is not accompanied by manipulation of shape data~~, of ~~manipulating~~ transforming corresponding texture data in conformity with the manipulation of this shape data.

21. (Currently Amended) The method according to claim 20, further comprising a second display step₄ of displaying an image based upon shape data that has been ~~manipulated at~~ transformed in said first manipulation step and texture data that has been ~~manipulated at~~ transformed in said second manipulation step.

22. (Currently Amended) The method according to claim 20, wherein the predetermined operation associated with said second manipulation step is a command for ending an operation for ~~editing~~ transforming the shape data ~~[[at]]~~ in said first manipulation step.

23. (Currently Amended) The method according to claim 20, wherein the predetermined operation associated with said second manipulation step is an operation for

switching a shape to be subjected to ~~manipulation at~~ transformation in said first manipulation step.

24. (Currently Amended) The method according to claim 20, further comprising an extraction step₂ of extracting shape data and texture data from object image data and supplying the shape data and texture data ~~[[to]]~~ for use in said first and second manipulation steps.

a' 25. (Currently Amended) The method according to claim 20, further comprising a selection step₂ of selecting one desired item of object image data if a plurality of items of object image data exist~~[[;]]~~,

wherein said extraction step ~~extracts~~ includes extracting shape data and texture data from object image data that has been selected ~~[[at]]~~ in said selection step.

26. (Currently Amended) An image editing method comprising:
a read-out step₂ of reading a bit stream, which has been compressed and encoded, out of a storage device;
a separation step₂ of separating the bit stream, which has been read out ~~[[at]]~~ in said read-out step, into at least a bit stream of shape information and a bit stream of texture information on a per-object basis;
a decoding step₂ of decoding, object by object, each bit stream obtained by ~~separation at~~ in said separation step, thereby generating shape data and texture data;

a manipulation step₁ of manipulating the shape data[[,]] which has been obtained [[at]] in said decoding step, ~~based upon a manipulation command from a user;~~

an altering step₂ ~~responsive to a predetermined command operation, which is not accompanied by manipulation of shape data;~~ for altering the texture data in conformity with the manipulation of the shape data [[at]] in said manipulation step;

a re-encoding step₃ of re-encoding the shape data that has been manipulated [[at]] in said manipulation step and the texture data that has been altered [[at]] in said altering step; and

a write step₄ of comparing a bit stream that has been re-encoded [[at]] in said re-encoding step and the bit stream that has been obtained [[at]] in said separation step, updating bit streams of portions that have been altered and writing the result to the storage device.

27. (Currently Amended) A storage medium storing a control program for causing a computer to execute image editing, said control program comprising:

code of an input step₁ of inputting image data consisting of shape data and texture data;

code of a separation step₂ of separating the image data into the shape data and texture data;

code of a shape manipulation step₃ of ~~manipulating~~ transforming the shape data separated from the image data [[at]] in said separation step so as to change a shape represented by the shape data; and

code of a texture manipulation step₁ of ~~manipulating~~ transforming the texture data in conformity with result of ~~manipulation at~~ transformation in said shape manipulation step after processing ~~[[at]]~~ in said shape manipulation step ends.

28. (Currently Amended) A storage medium storing a control program for causing a computer to execute image editing processing for editing object image data consisting of shape data and texture data, said control program comprising:

A
code of a first manipulation step₁ of ~~manipulating~~ transforming shape data based upon a user operation so as to change a shape represented by the shape data;

code of a first display step₁ of presenting a display of the shape data that reflects the ~~manipulation~~ transformation performed ~~[[at]]~~ in said first manipulation step; and

code of a second manipulation step₂ responsive to a predetermined operation, ~~which is not accompanied by manipulation of shape data~~, of ~~manipulating~~ transforming corresponding texture data in conformity with the ~~manipulation~~ transformation of this shape data.

29. (Currently Amended) A storage medium storing a control program for causing a computer to execute image editing, said control program comprising:

code of a read-out step₁ of reading a bit stream, which has been compressed and encoded, out of a storage device;

code of a separation step₁ of separating the bit stream, which has been read out ~~[[at]]~~ in said read-out step, into at least a bit stream of shape information and a bit stream of texture information on a per-object basis;

code of a decoding step₂ of decoding, object by object, each bit stream obtained ~~by separation at~~ in said separation step, thereby generating shape data and texture data;

code of a manipulation step₃ of ~~manipulating~~ transforming the shape data~~[[,]]~~ which has been obtained ~~[[at]]~~ in said decoding step, ~~based upon a manipulation command from a user;~~

Q' code of an altering step₄ ~~responsive to a predetermined command operation;~~ ~~which is not accompanied by manipulation of shape data;~~ for altering the texture data in conformity with the manipulation of the shape data ~~[[at]]~~ in said manipulation step;

code of a re-encoding step₅ of re-encoding the shape data that has been manipulated ~~[[at]]~~ in said manipulation step and the texture data that has been altered ~~[[at]]~~ in said altering step; and

code of a write step₆ of comparing a bit stream that has been re-encoded ~~[[at]]~~ in said re-encoding step and the bit stream that has been obtained ~~[[at]]~~ in said separation step, updating bit streams of portions that have been altered and writing the result to the storage device.
